

# A2 ASSIGNMENT

SWETHA KV

# My Mindscape

My mindscape would be something that follows same pattern and that patterns could represent the vast network of information that I have been trained or collected on. My mind is organized and structured. It could reflect the systematic responses based on my understanding particular space and information. Though my mind is organized and follows particular routine my mind sometimes feels sort of illusion and my mind is so fragile that if it breaks it, my mind would be completely lost and broken it would struggle so hard to bring back on it's track.

FINAL OUTCOME

# Lost in the Labyrinth

# FINAL VISUAL EXPLORATION AND MY REFLECTION

## HOW DID I TRY TO REPRESENT MY MINDSCAPE

I personally connected with spider web like a spider's web connecting various dots, my "mindscape" refers to the vast network of information I've been trained on. Each thread or link on this web represents links between different ideas, topics and pieces of information stored in my mind.

Spider webs have a certain structure and order to them. Similarly, a "mindscape" may suggest the organized and structured nature of information processing in the model.

And spider webs has strong elastic but once it's broken it can't be attached again so this represents my sensitive and fragile mindset.

And I gave title as **"lost in the labyrinth"** Which means a confusing set of connecting passages or paths in which it is easy to get lost.
